Thelook Ecommerce Retention Strategy and Performance Dashboard

agenda

1. What is happening?
2. Why is it happening?
3. What should we do?

Is the business growing through healthy repeat behavior, or is it still relying mainly on acquisition?

- Retention is improving, but revenue is still acquisition-led.

REVENUE MIX

Returning Revenue Contribution

Returning share is climbing across the latest 12 full months, but remains subscale compared to new customer inflow.

THE BOTTLENECK

~94% Average 90-Day Churn

Measured strictly since January 2020. The business operates like a one-and-done engine.

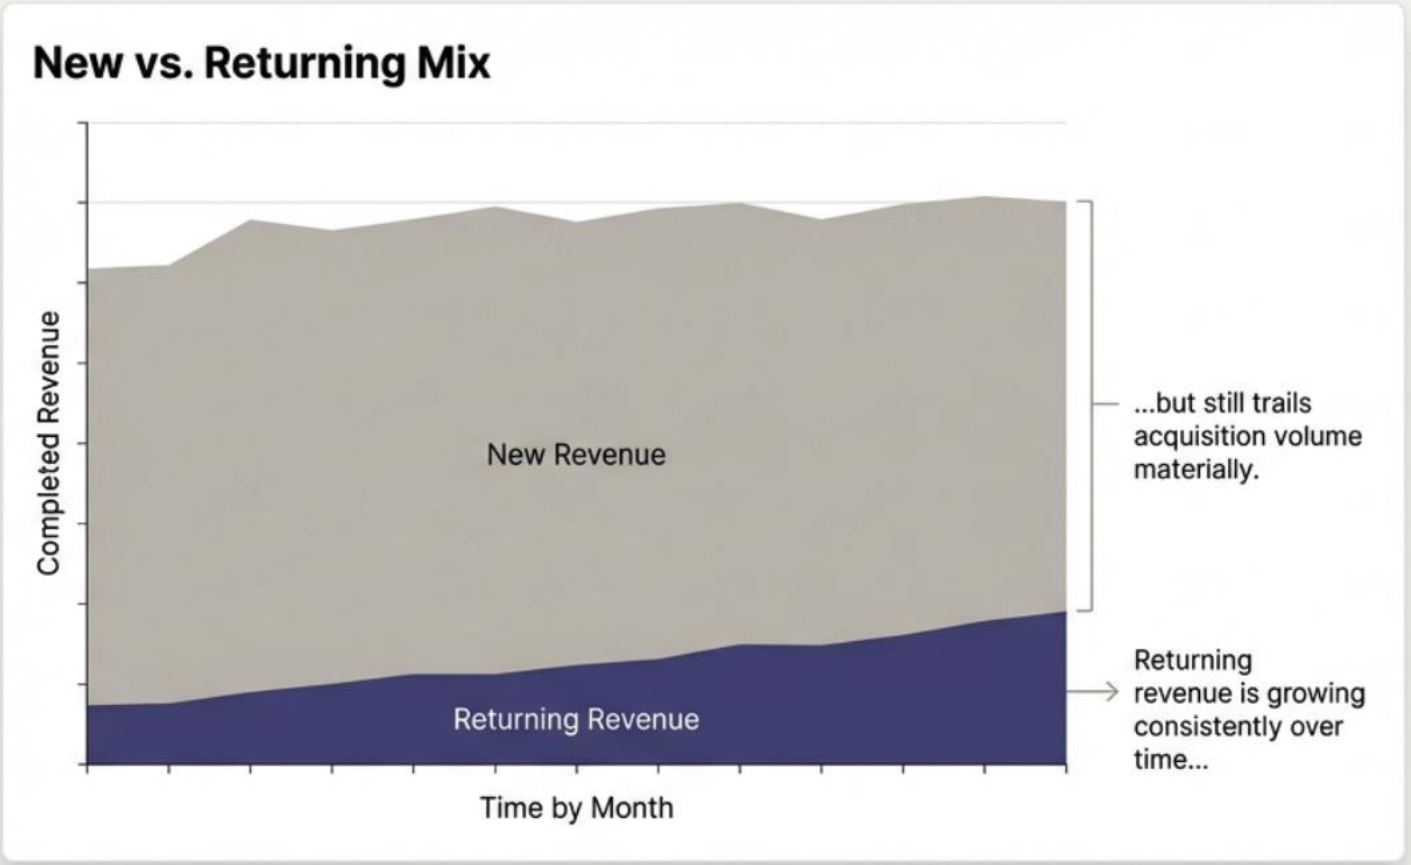
STRATEGIC LEVER

Repeat Purchase Mechanics

Top-of-funnel is working. The highest-ROI unlocked lever is converting first-time buyers into repeat customers.

TOPLINE REVENUE EXITS:

- BUT relies too heavily on filling the funnel every month.



Leadership Readout

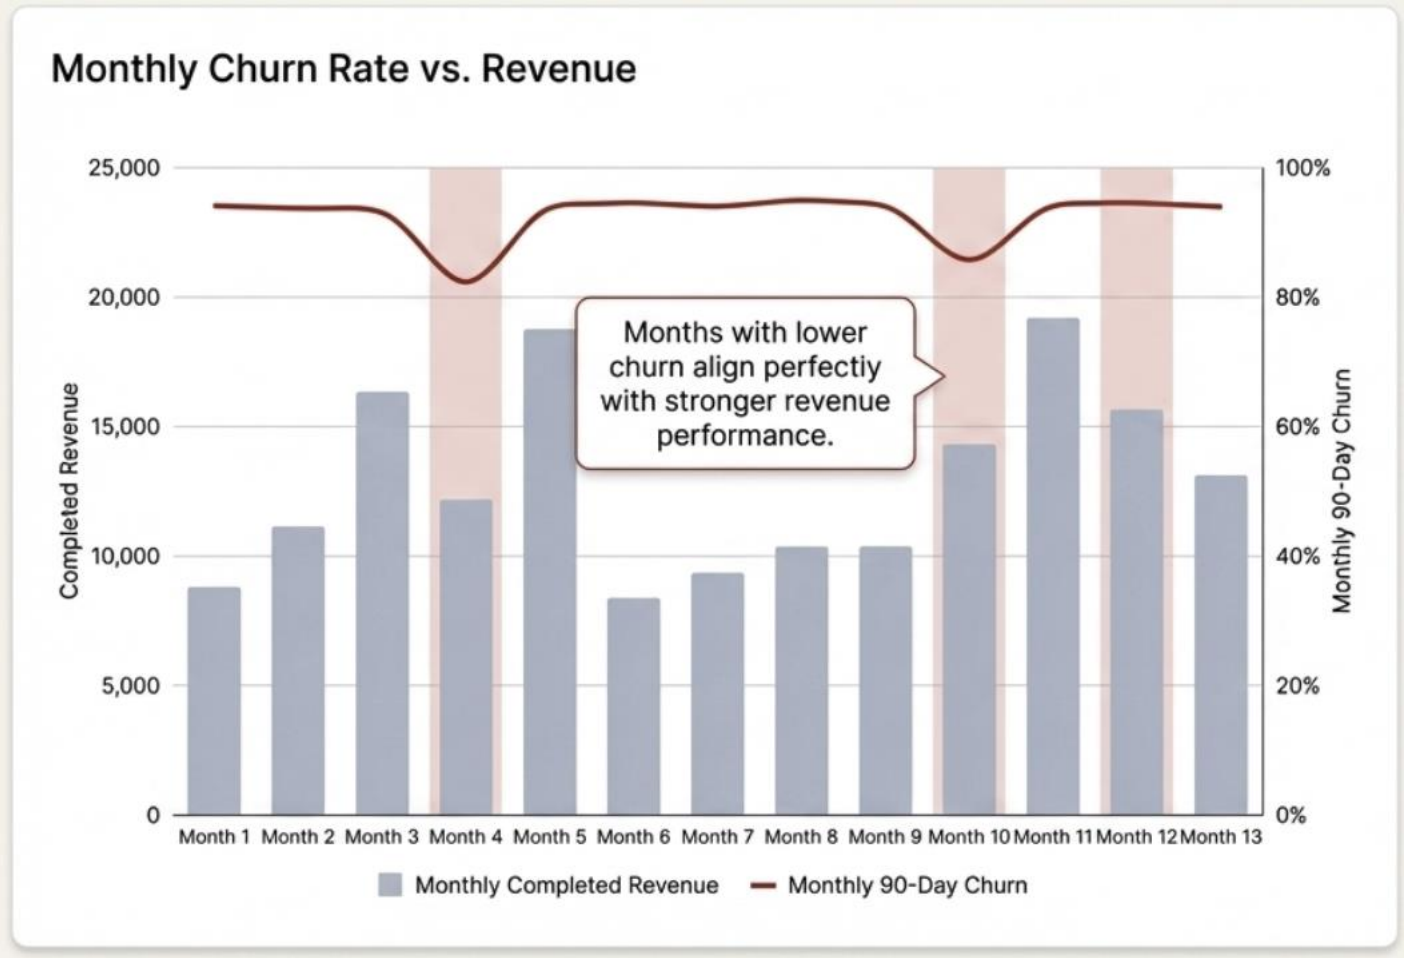
SIGNAL: The latest period shows meaningful, persistent dependence on new-customer revenue.

MEANING: Growth is currently fragile. If acquisition efficiency weakens or customer acquisition costs (CAC) spike, topline revenue will immediately feel the pressure.

ACTION: Shift focus from top-of-funnel acquisition to repeat-purchase loops.

Why?

High 90-days churn strictly limits repeat revenue growth



Mechanism

THE DATA REALITY

Churn stays persistently around 94% on average.

THE BUSINESS REALITY

We are losing the vast majority of buyers before they ever become repeat customers. Retention is not just a health metric; it dictates unit economics.

Retention gap

This segment view helps translate the broad retention problem into an operating plan: protect active repeat buyers and champions, reactivate at-risk users while they are still recoverable, and redesign the first-to-second purchase journey for newly acquired customers.

	Target & Profile	Product Action
PROTECT	**Target: Active Repeat & Champions** Small in count, highly economically dense.	Build a days_since_last_order field for high-value users. Trigger operational alerts before they age into churn risk.
RECOVER	**Target: At-Risk Base** Slipping away, but the recency window is still recoverable.	Run targeted reactivation programs immediately.
REDESIGN	**Target: Newly Acquired** The largest group, where long-run value leakage begins.	Completely redesign the first-to-second purchase journey.

Thank You
